

Magic Slice Image

For each slideshow you can set the following settings in the top line...

Width	<input type="text" value="590"/>
Height	<input type="text" value="300"/>
Autoplay	<input checked="" type="radio"/> Enable <input type="radio"/> Disable
Alignment	Centred <input type="button" value="v"/>
Next Prev Button	<input checked="" type="radio"/> Show <input type="radio"/> Hide
Slide Button	<input checked="" type="radio"/> Show <input type="radio"/> Hide
Play Pause Button	<input checked="" type="radio"/> Show <input type="radio"/> Hide
Timer Animation	<input checked="" type="radio"/> Show <input type="radio"/> Hide
Pause On Rollover	<input checked="" type="radio"/> Yes <input type="radio"/> No

- Slide Dimension: Width & Height
- AutoPlay Enable-auto play,
Disable – paused
- Alignment Centred X and Y
Top Left
Top Centre
Top Right
NONE – Allows you to position the slideshow yourself
- Next Prev Button show or hide
- Slide Button show or hide
- Play Pause Button show or hide

- Timer Animation show or hide
- Pause On Rollover Yes-When the user hovers the mouse over the image area, the timer will pause, then resume once they move away from the image area.

No- This functionality will not be applied, the timer will continue regardless of user interaction (other than pause button)

Now that the slideshow settings are sorted, now each individual slide has the following..

Enable Slide	<input checked="" type="radio"/> Yes <input type="radio"/> No
Image URL	/modules/mod_slice/in
Delay	7
Number Of Slices	10
Slice Type	Vertical
Tween Duration	0.5
Tween Duration Increment	0.025
Tween From	From Top
Tween Alpha	<input checked="" type="radio"/> Yes <input type="radio"/> No
Ease Type	easeInBack
Slide Has Info	<input checked="" type="radio"/> Show <input type="radio"/> Hide
Link Type	external
Link Url	
Target	_blank

- Enable or Disable each slide
- Image supported jpeg, png or gif
- Delay this is the amount of time the slide will be displayed in slideshow mode
- Number Of Slices Decide how many slices you wish to split the image into. If you want to animate the image as a whole, then enter '1' slice.
NOTE: Make sure that the slice width - 20/height - 50 will be a whole number otherwise the slicing will not work correctly. For instance, if your slideshow is 590px wide, 2, 10,15, 19, 30, 38, 57,114,285 (horizontal 300px: 2, 5, 10, 25, 50, 125)slices will be fine, and any other number that divides into 570 without leaving a decimal. 11 slices for instance wont work correctly.
Ex. Width: $590-20/57=10$ slices (work correctly). Ex. Height: $300-50/25=10$ slices (work correctly).
- Slice Type Horizontal slices
Vertical slices
- Tween Duration Number to indicate the amount of time each slice will take to tween into place.
- Tween Duration Increment Number to indicate the delay between the tweens of the slices.

- Tween From
FROM LEFT – Slices will animate into view from the left.
FROM RIGHT – Slices will animate into view from the right.
FROM TOP – Slices will animate into view from the top.
FROM BOTTOM – Slices will animate into view from the bottom.
NONE – Slices will animate into view using only a alpha fade animation.
- Tween Alpha
Yes – Slices will fade into view along with the direction defined in ‘tweenFrom’
No – Slices will not fade into view along with the direction defined in ‘tweenFrom’
- Ease Type
The type of ease you would like applied to the slices tweens.
- Slide Has Info
Yes – Slide has captions (captions covered in next section)
No - Slide does not have any captions
- Link Type
external – for linking to external URL’s
internal – for use with deeplinked websites
none – no link required
- Link URL
either the URL for external linkage or the SWFAddress value you wish to set on click.
- Link Target
for external URL’s target the method for opening the URL (_blank, _self etc)

Now, if you chose ‘Slide Has Info =”Yes”’ in the above settings for your slide. You can set the following options for each individual line of the caption.

X Position	10
Y Position	10
Rotation	0
Text Content	Change...
Font Size	25
Font Color	0xb7f53b <input type="checkbox"/>
Text Box	<input checked="" type="radio"/> Show <input type="radio"/> Hide
Text Box Color	0x111111 <input type="checkbox"/>
Text Box Alpha	0.9
Info Tween Duration	0.8
Tween Ease	easeInSine <input type="button" value="v"/>
Line Delay	0 <input type="button" value="v"/>

- X Position
The X position of the caption line
- Y Position
The Y position of the caption line
- Rotation
A value between 0-360 for how much you want to rotate the caption line.
- Text Content
The actual text for the caption line
- Font Size
The font size for the caption line
- Font Color
The font color for the caption line (use the colorpicker)
- Text Box
Show – Show a background behind the text
Hide – no background behind the text
- Text Box Color
The color for the box behind the caption line (use the colorpicker)
- Text Box Alpha
A numerical value between 0 and 1 to set the opacity of the box (0.5 sets the opacity to 50% etc)
- Info Tween Duration
Number of seconds it takes the caption line to appear.

- Tween Ease The type of ease you would like applied to the lines tween.
- Line Delay Number of seconds after the slide has finished animating that this line will start to appear. Use this variable to create sequential caption line animations, or set all of the lines to 0 to have all caption lines appear at the same time.

Keep repeating this for each line of your caption. This engine allows amazing customization options.

That's it, if you are experiencing any difficulties, or you would like some assistance with implementation, feel free to get in touch by filling out the contact www.magicpoint.org/support

Thanks
for buying!
